

# From Data to Knowledge

CERN Open Days  
14 & 15 September 2019

# Between LHC Particles Colliding ...

*LATELY INSIDE THE LHC:  
2 PROTONS 0.00000000000000000001 SEC BEFORE THE COLLISION*

# ... and the Presentation of Physics Results

Press coverage of the CERN Seminar in July 2012 on the Higgs boson search results

# Computing is Involved in All Stages

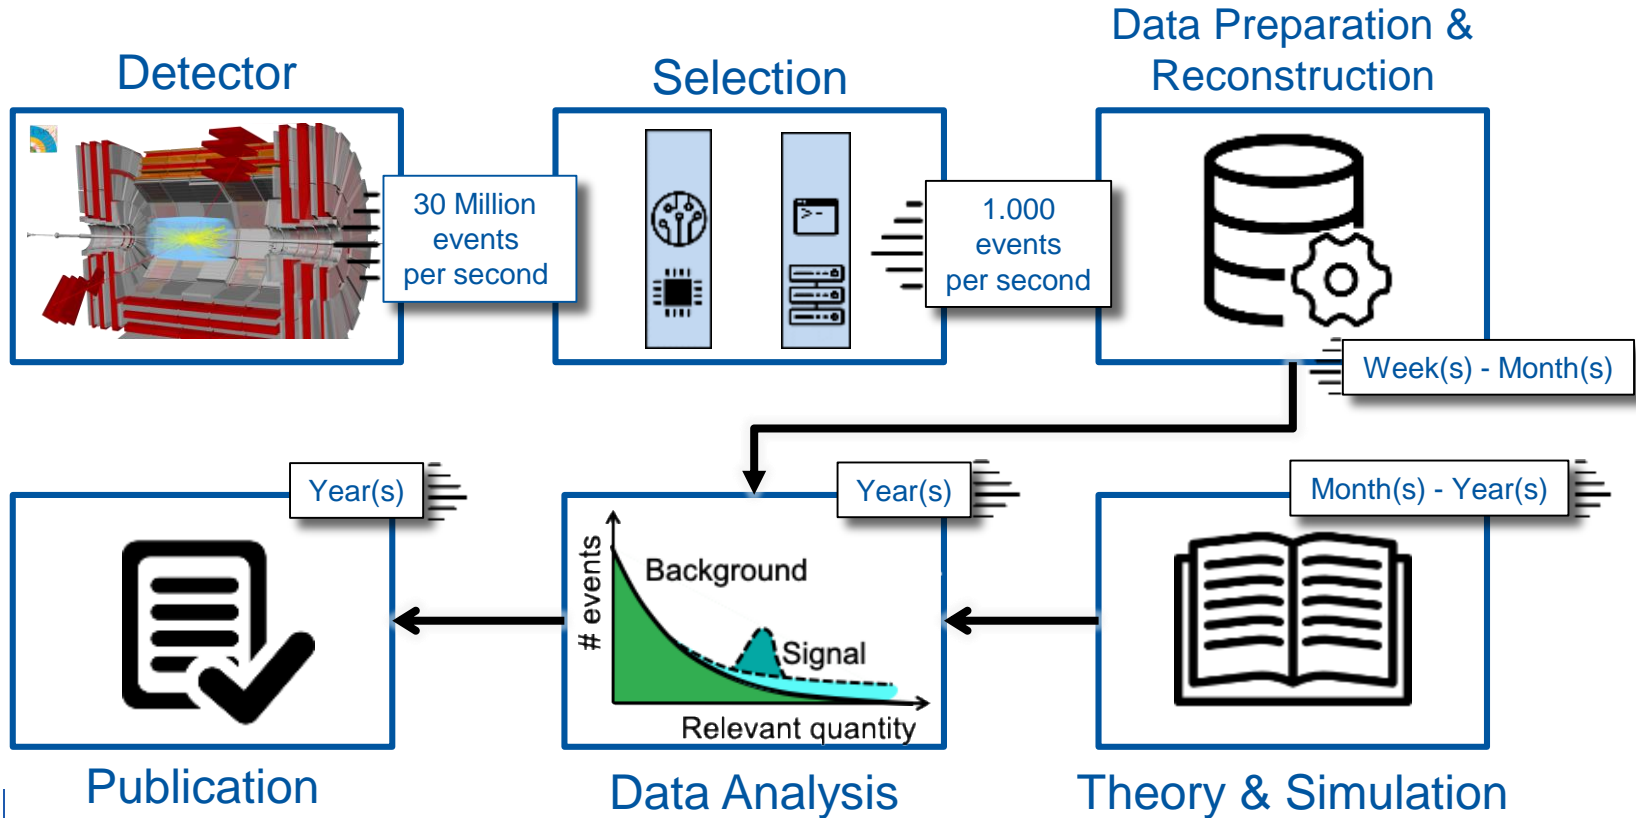

# Definition: Event

”Observation of the collision of two particles and their subsequent production of new particles”

# A Particle's Life

# Selection

Detector

- Filtering stage
  - Level 1 trigger
  - High Level Trigger
- Final filtered events are sent to a global computing grid worldwide for next processing stages

er

LHC

computing cores  
r and further

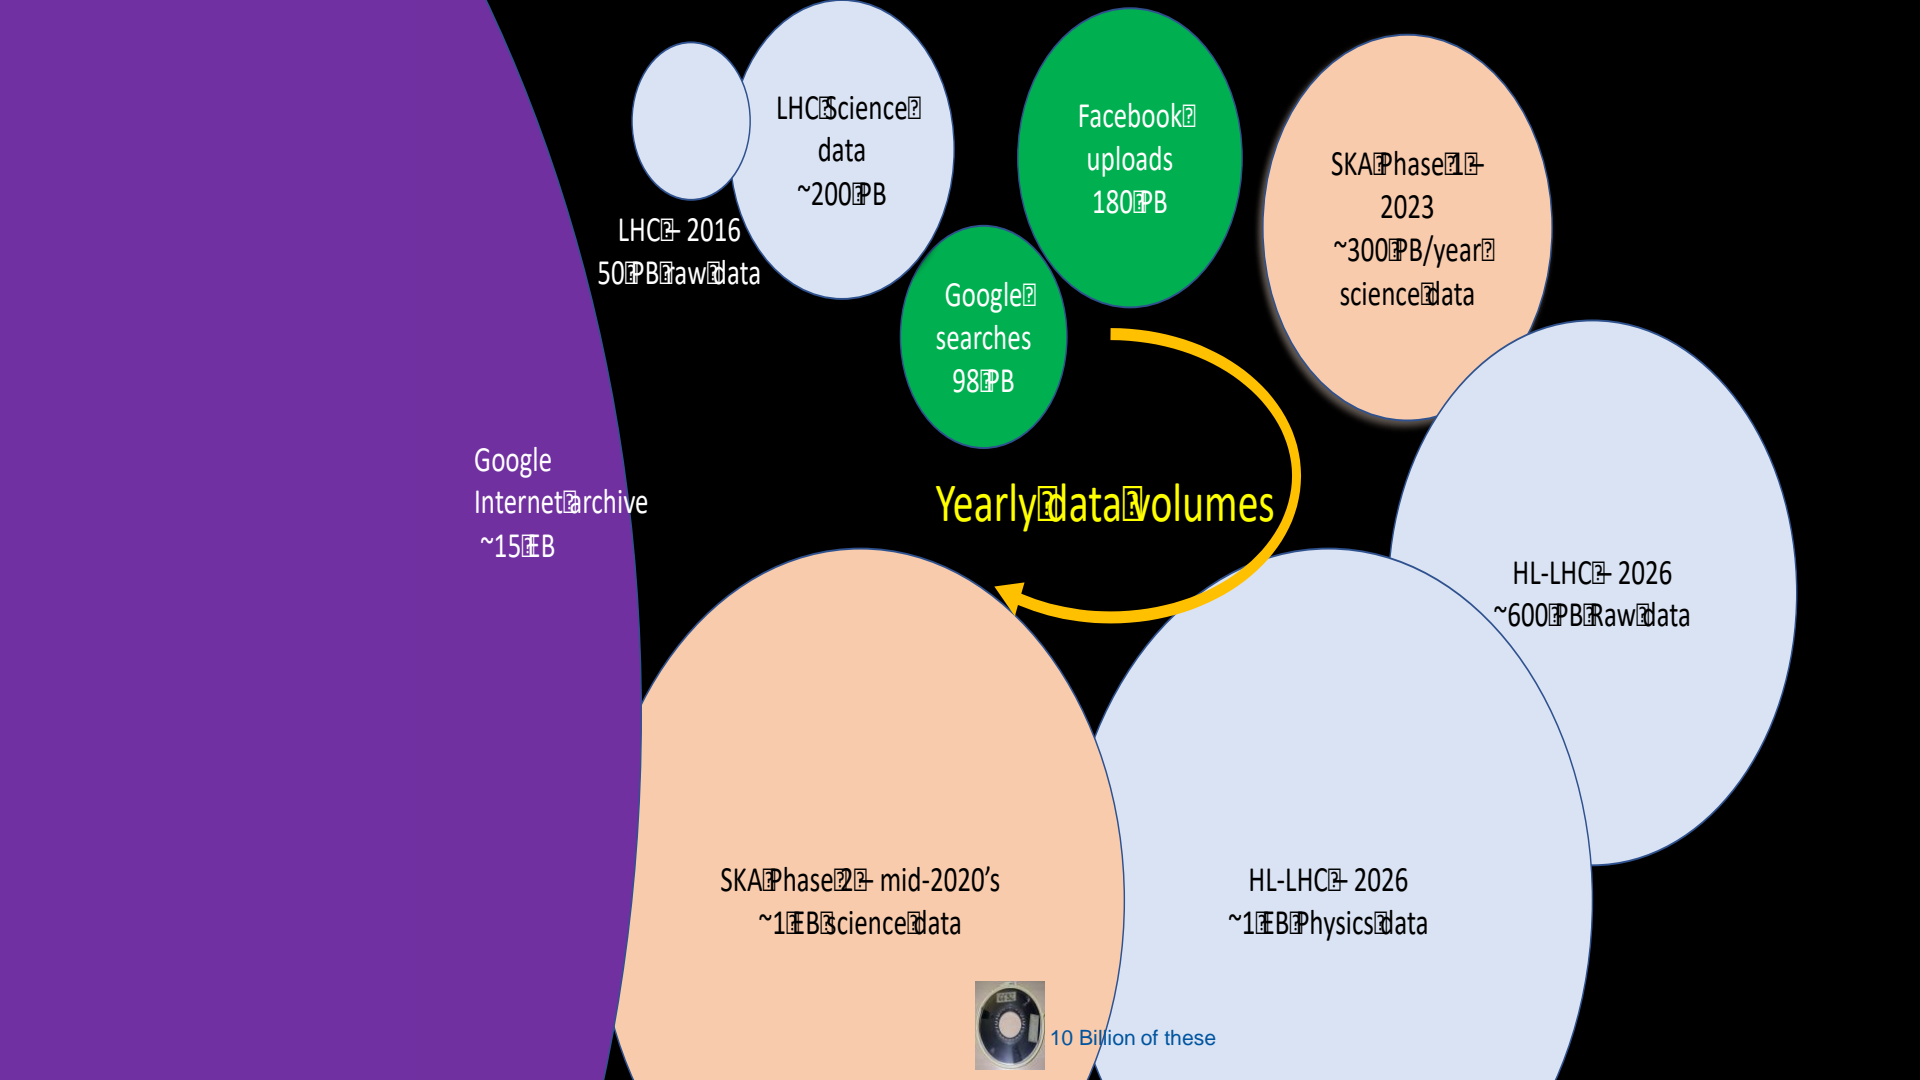

# Software Trigger Selection

(every dot represents 1.000 events)

LHC 2016  
50 PB Raw Data

LHC Science data  
~200 PB

Google searches  
98 PB

Facebook uploads  
180 PB

SKA Phase 1 2023  
~300 PB/year science data

HL-LHC 2026  
~600 PB Raw Data

SKA Phase 2 mid-2020s  
~1 EB Science Data

HL-LHC 2026  
~1 EB Physics Data

10 Billion of these

# The Worldwide LHC Computing Grid (WLCG)

- 170 computing sites in 42 countries providing
- Up to 900.000 computer cores
- ~ 1 exa-byte of disk and tape storage

→ Used for all later remaining data processing

# Data Reconstruction

Convert measured data points by the detector and energy into “tracks” and particles

→ Physics data ready for analysis

# Simulation

- Particle collision and detector response simulated with computer programs
- Simulation is essential for data analysis and design of new detectors
- Majority of WLCG resources needed for simulation

# Data Analysis

Physicists analyze the reconstructed data with statistical methods to verify or falsify theoretical predictions

# You can help to process LHC data at home ...

Volunteer  
computing  
for the LHC

# Backup

# Selection of events (Trigger)

- Filtering stages installed in the experimental areas around the LHC
  - Level 1 trigger implemented in hardware
  - High Level Trigger (HLT) running on farms of several 10 thousand computing cores
- Final filtered collisions then exported to CERN computer center and further worldwide for next processing stages
